

LIVE DATA SYNC / PLATFORM FEATURE

Wire your AI to a living **data stream.**

AVCodex agents move from static knowledge bases to live, automated sync. Your pricing, your spec sheets, your room data: always current.

THE PROBLEM

The hidden danger of static knowledge bases.

WHAT BREAKS

Once a file is uploaded, its accuracy starts degrading the moment the source changes.

Your AI's memory fractures from reality.

The automation pipeline.

01

External data changes

- Dealer pricing sheet
- Mfr spec page (Crestron, QSC)
- Internal install standards

02

AVCodex refetches automatically

03

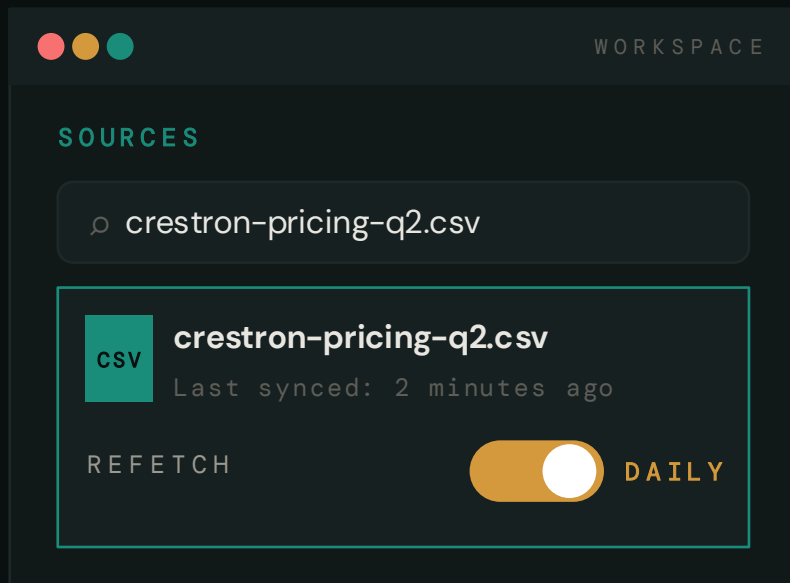

Agents answer with live data

Updated price is \$4,895.

Got it: thanks!

Activate the live connection.

- 1 **Open the agent profile**
Settings menu in your AVCodex workspace
- 2 **Click Sources**
Where your knowledge base files live
- 3 **Find the file**
Spec sheet, pricing doc, install manual
- 4 **Enable Refetch**
Toggle on. Set frequency. Done.

How often should you refetch?

	RECOMMENDED BASELINE Daily	Weekly	Monthly
Data volatility	High	Medium	Low
Example source	Live dealer pricing, BOM spreadsheets	Mfr release notes, project status	Install standards, policy docs
Recommended use	Anything client-facing with live numbers.	Status that changes on a predictable cadence.	Stable foundational guidelines.

The continuous intelligence loop.
